

PA Mixer Amplifier

350W RMS/450W Max.

SSA-350DP

- Thank you for purchasing the AHUJAPAMixer Amplifier.
- Please read this manual thoroughly before making connections and turning on the power. Following
 the instructions in this manual will enable you to obtain optimum performance from your new AHUJA PA
 Mixer Amplifier.
- Please retain this manual for future reference.

Safety Instructions

Read the Instructions: Please read all the instructions in this section carefully before installation or use of the product. All the safety instructions must be followed.

Retain the Instructions: Please retain this Instruction Manual for future reference.

This symbol, wherever it appears, alerts you to the presence of uninsulated hazardous voltage that may be sufficient to constitute a risk of electric shock. External wiring to any terminal marked with this symbol must be done by a trained and instructed person only.

This symbol, wherever it appears adjacent to a component, alerts you that the concerned component can only be replaced by another of the exact same specifications.

WARNING

- To reduce the risk of electric shock, do not remove the top cover. No user serviceable parts inside. Refer all servicing to qualified personnel only.
- Before replacing any fuse, make sure the set is switched off and disconnected from the AC mains or any other power source. Replace a fuse only with another of exactly same specification.

CAUTIONS

Water & Moisture: To reduce the risk of fire or electrical shock, do not expose this set to rain or moisture. Do not use this set near water or in a wet location. Do not keep any object filled with liquid, such as a vase, on top of this set. Do not insert or remove the AC mains plug with wet hands.

Power Source: The voltage & frequency of the AC mains supply, and the voltage of the external battery, (if applicable) to which this set can be connected, is marked on the rear panel of the set. Do not connect this set to any power source other than those specified on the rear panel.

Power Cord Protection: Do not cut, kink, damage or modify the AC power cord supplied with this set. Keep the AC power cord away from heaters and harmful chemicals. Do not keep any heavy object on the power cord.

Operation on Generator: When operating this set on a generator, make sure the set is switched off till the generator voltage has stabilized.

Ventilation: This set should be situated so that its location or position does not interfere with its proper ventilation. Do not cover the ventilation holes / slots. Do not insert or drop anything into the ventilation holes / slots.

Stability: This set must be kept in a stable and flat horizontal position, and never in a tilted position. Do not place this set on an unstable stand, tripod, bracket or mount. Do not use attachments which are not supplied or explicitly recommended by the manufacturer.

Cover Strip: The cover strip of the 100V / 70V audio output terminal strip, and of any other high voltage output terminal strip, must be replaced after making connections. Failure to do so may result in exposure to hazardous voltages.

Earthing: This set must be earthed properly before use. A wire from the Earth terminal on the rear panel must be connected to electrical earth.

Cleaning: Disconnect this equipment from the AC mains and external battery before cleaning. Clean with a damp cloth, but do not allow any liquid to enter the set. Do not clean with liquids or aerosols.

Exposure to Heat: Do not touch the heatsinks while the set is working.

Features/General Description of Product

- Designed for use in a wide variety of PA applications.
- SSA-350DP is a 350 Watts Mixer Amplifier with Seven Mic inputs and Two Independent Auxiliary inputs.
- Built-in MP3 playback facility, with remote control is provided. It can be used to play back music in MP3 format using USB pen drives, SD cards or mobile phone (through bluetooth). A backlit LCD display shows the track being played and the time elapsed on that track.
- SSA-350DP has a Preamp output for recording the program, a Line output for connecting to a Booster Amplifier and a Line input for connecting to an external PAAudio Mixer.
- Cut and Boost type tone controls for desired tonal shaping.
- Box Speaker/ Driver Unit selector switch has been provided for protecting the Driver Unit's diaphragm from unwanted low frequencies. Since Box speakers can reproduce the full spectrum of audio frequencies but Driver Units cannot reproduce very low frequencies, the switch should be positioned to the Driver Unit side when Driver Units, Horns and Column speakers are connected.
- Circuit Protector Device has been provided which safeguards the amplifier against overload and short circuit.
- Provision for automatic changeover from AC to Battery Operation ensuring continuity of program has been provided.
- Protection provided against the reverse polarity of Battery connections.
- Ease of operation, combined with service accessibility has been optimized in the design.

Front Panel Controls & Features

1. MIC-1 Input Jack Socket

For accepting unbalanced signal from a low impedance microphone.

- 2. MIC-2 Input Jack Socket
- 3. MIC-3 Input Jack Socket
- 4. MIC-4 Input Jack Socket
- MIC-5 / Aux-1 Selector switch Slide this switch to select the desired input.
- 6. MIC-5 Input Jack Socket
- 7. MIC-6/Aux-2 selector switch
- 8. MIC-6 Input Jack Socket
- 9. MIC-7 USB selector switch
- 10. MIC-7 Input Jack Socket
- 11. BOX SPEAKER/DRIVER UNIT Selector Switch

12. BASS Control

For attenuating or boosting the signal level of low frequencies.

13. TREBLE Control

For attenuating or boosting the signal level of high frequencies.

14. MASTER Volume Control

For adjustment of the overall volume level from the amplifier.

15. POWER Switch

Push the top part of the knob to switch the

amplifier ON. Push the bottom part of the knob to switch the amplifier OFF.

16. POWER LED

This LED glows when the amplifier is switched ON.

17. OVERLOAD LED

This LED glows when the circuit protector trips.

18. RESET button

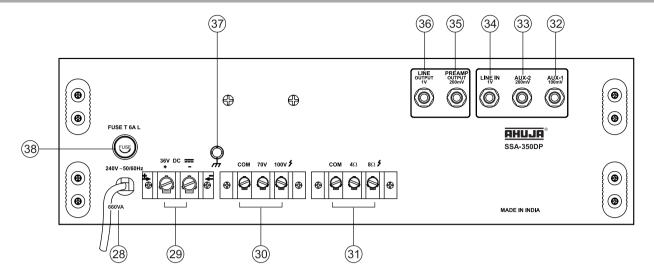

This button pops out when the circuit protector trips. Rectify the cause and press the RESET button for resetting normal operation of the amplifier.

19. LED Array

This indicates the output level of the amplifier.

- 20. MP3 playback facility (Refer to page 7)
- 21. MIC-7/USB Volume Control
- 22. MIC-6/AUX-2 Volume Control
- 23. MIC-5/AUX-1 Volume Control
- 24. MIC-4 Volume Control
- 25. MIC-3 Volume Control
- 26. MIC-2 Volume Control
- 27. MIC-1 Volume Control

Rear Panel Controls & Features

28. 3 CORE AC MAINS CABLE WITH PLUG

29. BATTERY Terminal Block

For connecting three 12V Car Batteries in series (which becomes 36V) as standby power source.

30. SPEAKER Terminal Block (70V, 100V)

For connecting speakers with 100V line matching transformers.

31. SPEAKER Terminal Block (4 Ω and 8 Ω)

For connecting low impedance speakers.

32. AUX-1 Input Jack Socket

For accepting an unbalanced signal from an auxiliary source like a Tuner, MP3 Player, Echo or Audio Mixer etc.

33. AUX-2 Input Jack Socket

34. LINE Input Jack Socket

For connecting inputs such as a CD Player. Also for connecting an external Mixer to enhance the number of inputs.

35. PREAMPLIFIER Output Jack Socket

For connecting to the AUX input of another amplifier or a recorder for recording purpose.

36. LINE Output Jack Socket

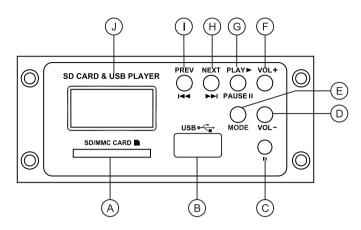

For connecting to a booster amplifier to obtain combined higher power output.

37. EARTH Terminal

38. AC MAINS FUSE Rating 6 AMP 250V (T 6A L)

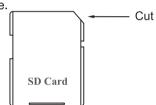

This protects the amplifier from any excessive current flow.

MP3 Playback Facility: Controls & Features

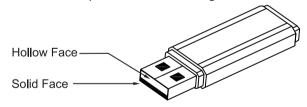

A. SD/MMC Card Connector: Insert the SD/MMC Card into its appropriate slot to play. When taking out the card, pull the card to take out.

While inserting SD/MMC card into the slot, ensure that the card is inserted in such a way that all pins are facing downward and cut is towards right as shown in figure.

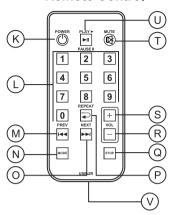

B. • USB Connector: Insert the USB drive here. While inserting USB drive into the USB connector, hold the USB drive in such a way that hollow part of the USB drive is upwards as shown in Figure.

Any forceful insertion in wrong direction will damage the connector.

- C. IR Sensor: Picks up signal from the Remote control. Point the Remote control toward this sensor when using the remote control.
- **D. VOL-:** To decrease volume level of MP3 player.
- E. MODE: To select the USB, SD or Bluetooth.
- F. VOL+: To increase volume level of Mp3 player.
- G. ►II PLAY/PAUSE: Press PLAY/PAUSE once to Pause if music is already playing. Press PLAY/PAUSE again to resume playing. Play will resume from the same point where it had stopped.

Remote Control

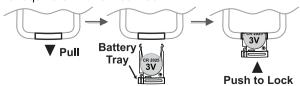

- H. ►►I Next: Press NEXT to select next forward music track. Pressing NEXT repeatedly will move the system to successively next forward tracks.
- I◄■ Prev: Press PREV to Select the previous track. Pressing PREV repeatedly will move the system to successively previous tracks.
- **J. LCD Display:** Displays 3 digits of the track selected to play i.e 001 to 999. During play, displays the time duration of the track played.

Remote Control

- K. Power: Press once to switch off MP3 digital player, press again to switch ON.
- Number key 0 to 9. To choose the track number to be played.
- M. ► : To select the previous track.
- N. MODE: To select the USB, SD or Bluetooth.
- O. ▶►I: Press to select the next track.
- Press once to repeat the song being played. Press again to repeat all the songs.
- Q. STOP: Press to stop the track being played.
- **R. Vol:** Press to decrease the volume of Digital Player.
- S. Vol: Press to increase the volume of Digital Player.
- T.

 MUTE: Press once to mute the sound, press again the resume the sound.
- U. ►II PLAY/PAUSE: Press Play/Pause once to Pause when music is already playing. Press Play/Pause again to resume playing.
- V. Battery Replacement: Pull out the battery tray and replace the battery with positive electrode facing upwards as shown in fig. below. Push the battery compartment back to the close position. Use CR2025 or equivalent lithium coin cell.

Pairing of Bluetooth Device

SWITCH ON the amplifier in use. The Default condition of the MP3 digital Player is USB/SD mode. The display shows ———.

To play the MP3 programme from mobile phone or laptop, via bluetooth, the PAIRING of the Bluetooth devices of mobile phone & Amplifier is necessary. To use Bluetooth, Press Mode switch to select Bluetooth.

Pairing is done as follow:-

SELECT the Bluetooth option in Mobile Phone or laptop & follow the instruction as appearing on mobile/laptop screen.

Normally the following general instructions are followed:

Press ACTIVATE /ON/DISCOVERABLE/SEARCH, etc, as applicable in the mobile phone or laptop used.

The mobile phone or laptop starts searching for the new Bluetooth device. The moment Bluetooth appears on the mobile phone or laptop, select the new device i.e. Bluetooth and press OK or allow it to appear on mobile. System is ready to use.

In some mobiles, it asks for a code to allow access. Press 0000 and follow the steps, like pressing "OK", "Allow once", "Allow always" etc. and make the device ready for use.

Select the MP3 programme from mobile phone or laptop and press PLAY. The same song starts playing on the Ahuja Amplifier. We can SELECT Volume, FF, Rewind, Play/Pause function either from keys on the Amplifier or through Remote Control.

Note: It is not necessary that all functions of remote control will be activated through Bluetooth and compatibility varies from mobile to mobile.

However, some mobile phones/computers may require a different procedure. Please read the user manual of the phone/computer.

Interconnections

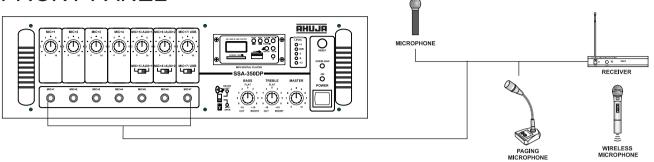

- The amplifier should be placed such that its position does not obstruct with its proper ventilation.
- The amplifier must be powered through an AC earthed mains outlet.
- All connections must only be carried out or changed with the amplifier switched OFF.
- The amplifier may be operated from a DC supply of 36 Volts (three car batteries connected in series).
- To avoid loud switching noise, always switch ON the amplifier after all other units of the audio system have been switched ON. After operation switch it OFF first, then the other units.
- The connection diagrams depicted in this operating manual shows some of the typical types of input sources (Mics, Keyboards, MP3 Players, Mixers, CD Players etc.) and speakers (Wall, Ceiling, Box, Horn, Column) which can be connected to the amplifier. For correct connection and operation check the specification of the connected equipment.

CAUTION

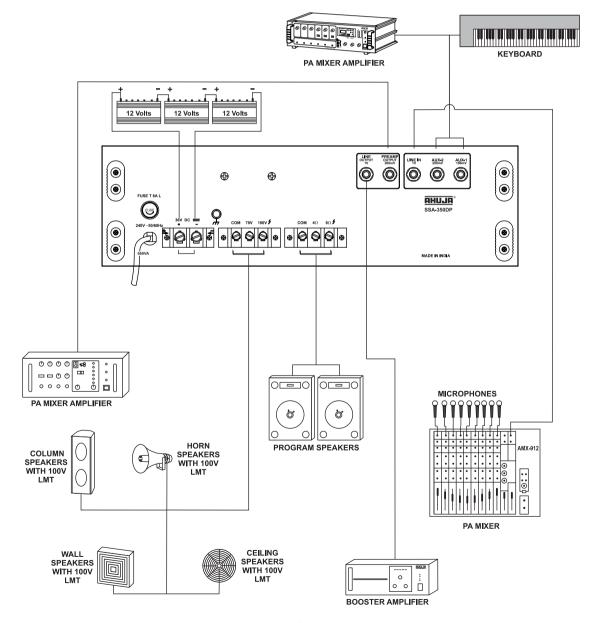

• The equipment must be earthed properly before operating it to avoid electric shock. A wire from the Earth Terminal must be connected to electrical earth for safe operation.

Speaker Connection Guidelines

SSB-350DP is a high-powered PA mixer amplifier. Therefore it is very important that correct loudspeaker connections are made to avoid damage to the amplifier or speakers.

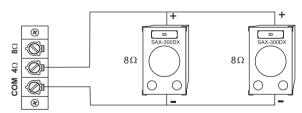

Resultant Impedance = $(8 \text{ Ohm/2}) \times 2 = 8 \text{ Ohm}$

Resultant Impedance = (8 Ohm/2) = 4 Ohm

Resultant Impedance = (8 Ohm/2) = 4 Ohm

Low Impedance Speaker Connections

- Box type Speakers can be directly connected to Com- $4\Omega/8\Omega$ Terminal Strip.
- The Box Speaker / Driver Unit switch must be kept at Box Speaker position. If by mistake the switch remains in Driver Unit position the quality of sound will not be rich and natural.
- No Driver Units / Horn Speakers / Column Speakers (with 100V LMT) should be connected to Com- $4\Omega/8\Omega$.

Connecting Four SRX-120DXM Speakers

The Four SRX-120DXM speakers (each speaker can handle 100W of power) should be connected in parallelseries combination as shown in figure. Two groups of two speakers each are connected in parallel and then the groups are connected in series. The resulting impedance would be 8Ω . Thus they should be connected to the 8Ω tap of the amplifier.

Connecting Two SRX-250DXM Speakers

The Two SRX-250DXM Speakers (each speaker can handle 200W of power) should be wired in a parallel combination as shown in figure. The resulting impedance will be 4Ω . The speaker system should be connected to the 4Ω tap of the amplifier.

Connecting Two SAX-300DX Speakers

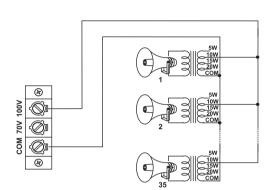

The Two SAX-300DX speakers (each speaker can handle 300W of power) should be wired in parallel as shown in figure. The resulting impedance of the speaker system is 4Ω . Thus they should be connected to the 4Ω tap of the amplifier.

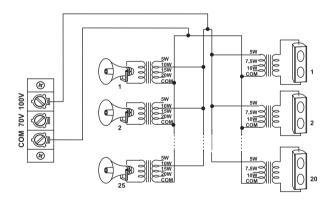

IMPORTANT

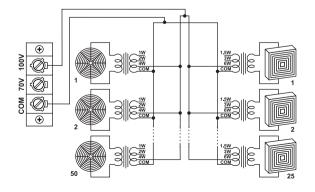

- When Box speakers are connected to COM-4Ω / 8Ω Terminal Strip NO Speakers / Driver Units with 100V LMTs should be connected to the Red Terminal Strip marked COM-70V/100V.
- Box Speakers should be connected only to either COM- 4Ω or COM- 8Ω terminals as illustrated above but never to more than one set of terminals.

Speaker Connection Guidelines....

High Impedance Speakers or Speakers Using A 100V Line Matching Transformer

- Only Driver Units / Horn Speakers / Column Speakers with 100V Line Matching Transformers are to be connected to Com-70V / 100V Terminal Strip.
- The Box Speaker / Driver Unit switch must be kept at Driver Unit position.
- When any of the above speakers are connected to the Com-70V / 100V Terminal Strip then NO Box speakers should be connected to the COM-4Ω/8Ω Terminal Strip.
- The power drawn from the amplifier should not exceed 350 Watts.

Connecting Thirty Five Driver Units with 100V LMT

35 Driver Units with 100V Line Matching Transformer connected at 10 Watts tap can be operated.

Connecting a Combination of Driver Units and Column Speakers with 100V LMT

25 Driver Units with 100V LMT at 10 Watts and 20 Column Speakers with 100V LMT at 5 Watts can be connected together. The power drawn from the amplifier should not exceed 350 Watts.

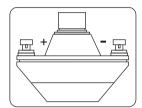

Connecting a combination of Wall and Ceiling Speakers with 100V LMT

50 Ceiling Speakers with 100V LMT at 4 Watts and 25 Wall Speakers with 100V LMT at 6 Watts can be connected together. The power drawn from the amplifier should not exceed 350 Watts.

Speaker Connection Guidelines....

Use of 70 Volt Line

A loudspeaker / Driver Unit with its LMT adjusted to the 15W tap, when connected to COM and 100V terminals on the Amplifier's Terminal Strip will draw 15W from the Amplifier but when the same is connected to COM and 70V it will only draw half power i.e. 7.5W. A good use of 70V line tap can be made in installations where large number of Speakers / Driver Units are to be installed for more even distribution of sound.

Correct Phasing of Loudspeakers

- When two or more Speakers/Units are installed in the same area and are facing the same direction, it is essential that their cones/diaphragms act in unison. Otherwise the sound level of one speaker will be cancelling the sound level of the other. To avoid any mistake, the terminals of Box speakers and the Driver Units are marked '+' & '-'. Always connect the COM of the Amplifier to '-' of speaker & $4\Omega/8\Omega$ of the amplifier to the '+' of the speakers.
- In case of LMT's the COM of all the LMT's should be connected to the COM of the red strip terminal of the amplifier and the power tap to 100V line as shown in figure.

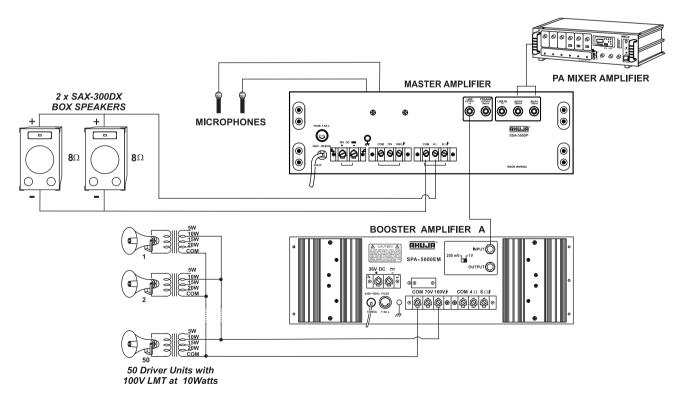

IMPORTANT

- When 70 / 100 Volt line is being used, no speakers / driver unit should be connected to 4Ω / 8Ω (Low Impedance) Tap.
- Loudspeaker / driver unit should be connected to either COM-100V or COM-70V terminals, but never to more than one set of terminals.

Typical Applications

Connecting SSA-350DP To One SPA-5000EM To Get A 850W Mono System

- Connect Microphones and other Program Sources to the input jacks of the MASTER AMPLIFIER, which is the SSA-350DP
- 2. The Pre-output jack of SSA-350DP should be connected to the input jack of the SPA-5000EM. The sensitivity switch of the SPA-5000EM should be at 200mV.
- 3. In this manner the inputs connected to SSA-350DP will feed both the amplifiers creating a 850W output system.
- 4. Loudspeaker connections to both the amplifiers should be done independently. Each of the amplifiers can be connected to either Box type speakers or to speakers using the 100V LMT but NEVER to both together. Speaker system impedance should be matched to the output impedance of the amplifier and thus should be connected to the corresponding tap of the amplifier.
- 5. When connecting box speakers to an amplifier the Box Speaker / Driver Unit switch should be set to the Box Speaker side and when connecting driver units, wall, ceiling or column speakers with 100V LMT, the switch should be turned to the Driver Unit side.
- When speakers with 100V LMT are used, total power drawn should not exceed 500W in case of SPA-5000EM & 350W in case of SSA-350DP respectively.
- 7. Finally when operating the system, the Bass & Treble controls of the individual amplifiers can be adjusted to give optimum tonal quality of sound to suit the system requirements.
- 8. This kind of system is ideal where both high and low impedance speakers are being used.

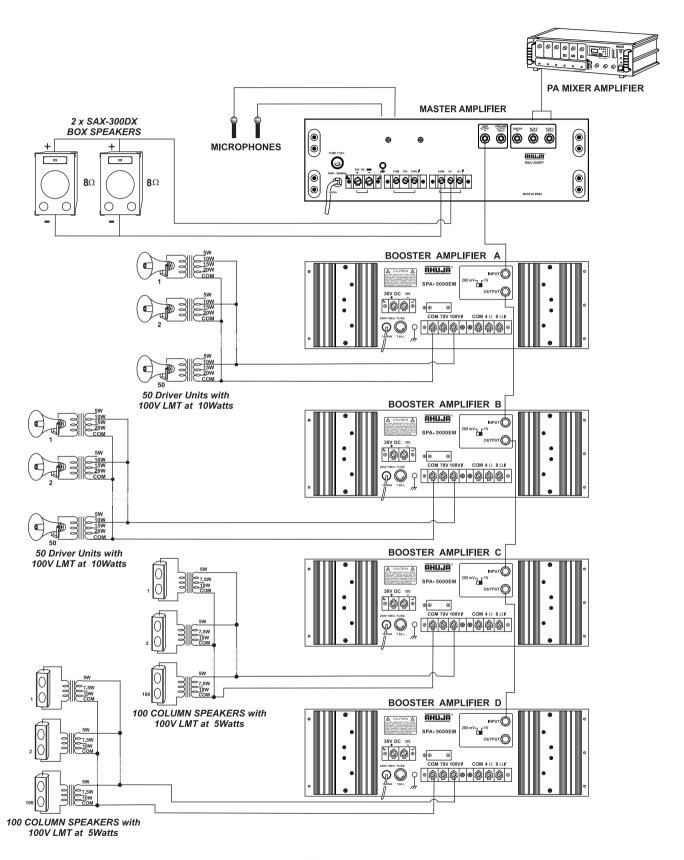

Typical Applications....

Connecting SSA-350DP To two SPA-5000EM To Get A 1250W Mono System

- 1. Connect Microphones and other Program Sources to the input jacks of the MASTER AMPLIFIER, which is the SSA-350DP.
- 2. Connect the Line-Out of the MASTER AMPLIFIER to the input jack of the first SPA-5000EM (BOOSTER A) using a patch-cord with Y4R phone plugs at both ends. The sensitivity switch next to the input & output jacks should be towards 1V.
- 3. The output jack of BOOSTER A should be connected to the input jack of the second SPA-5000EM (BOOSTER B). The sensitivity switch of the second booster should also be at 1V.
- 4. The third and the fourth SPA-5000EM (BOOSTER C and BOOSTER D) should be connected in the same way. A maximum of four boosters should be connected in this way otherwise the line output of the MASTER AMPLIFIER will get loaded.
- 5. In this manner the inputs connected to the MASTER AMPLIFIER will feed all the five amplifiers creating a 2350W output system.
- 6. Loudspeaker connections to each of the five amplifiers should be done independently. Each of the amplifiers can be connected to either Box type speakers or to speakers using the 100V LMT but NEVER to both together. Speaker system impedance should be matched to the output impedance of the amplifier and thus should be connected to the corresponding tap of the amplifier.
- 7. When connecting box speakers to an amplifier the Box Speaker/Driver Unit switch should be set to the Box Speaker side and when connecting driver units, wall, ceiling or column speakers with 100V LMT, the switch should be turned to the Driver Unit side.
- 8. When speakers with 100V LMT are used, total power drawn should not exceed 500W incase of any of the booster amplifiers & 350W in case of SSA-350DP respectively.
- 9. Finally when operating the system, any adjustments in the tonal quality of the sound if required can be made from the MASTER AMPLIFIER.

Typical Applications....

Connecting One SSA-350DP And Four SPA-5000EM For Making A 2350W Mono System

15

Specifications

Model	SSA-350DP	
Power Output	450W RMS Max.	
	350W RMS at 10% THD	
	320W RMS at 5% THD	
	300W RMS at 2% THD	
Output Regulation	≤2 dB no load to full load at 1kHz	
Input Channels	7 × Mic. 0.8mV / 4.7kΩ	
	(Mic source impedance 50 Ω to 1k Ω)	
	Aux1 100mV / 470kΩ	
	Aux2 200mV / 470kΩ	
	Line Input 1V / 50 k Ω	
Mp3 Playback	Built-in MP3 playback facility (USB, SD, MMC card and Bluetooth) Remote Control provided	
Frequency Response	50 – 15000Hz ± 3dB	
S/N Ratio	60dB	
Tone Controls:		
Switch at Box Speaker Position	Bass: ±10dB at 100Hz Treble: ±10dB at 10kHz	
Switch at Driver Unit Position	Bass: -10dB at 100Hz Treble: ±10dB at 10kHz	
Pre-amp Output	$200 \text{mV} / 600 \Omega$ -	
Line Output	1V / 1kΩ -	
Output Taps for	4 & 8Ω (for direct connections)	
Speaker Matching	70 & 100V Line (for use with LMT)	
Power Supply	AC: 220 - 240V 50 / 60Hz; DC: 36V (3 × 12V Car Battery)	
Protection	AC: Fuse 6Amp. (T 6A L); DC: 15Amp. Circuit Protector	
AC Power Consumption	660VA	
DC Power Consumption	6A	
Dimensions	W480 × H155 × D360 mm	
Weight	18.96 kg Approx.
